Glooko Instructions

Before getting started:

- Confirm that the Glooko Uploader is installed on your desktop (for instructions, see How do I install the Glooko® Uploader?).

- Ensure that the Glooko Uploader is not open.

- Have your USB-A to Micro cable (which came with your Starter Kit and is used to charge the DASH PDM) ready.

  - **NOTE:** If you need to order a new USB-A to Micro cable, you can do so via the Glooko webstore.

To upload your Omnipod DASH™

1. Plug your USB-A to Micro cable into your computer.

2. Unlock the DASH PDM, and while unlocked, plug it into the other end of your USB-A to Micro cable.

3. Tap **Export** on the DASH PDM, then tap **Done**.

4. Open the Glooko Uploader software on your computer and ensure you are logged into your Glooko account. The data upload will begin automatically.

5. Once the upload is complete, click **View Data** to view your data in your Glooko account.

Having trouble uploading? See I'm having trouble uploading my Omnipod DASH™ via Glooko® Uploader.
